

: Proposal to Fix

CONFUSION BETWEEN WALLET BALANCE, SAVINGS TOTAL & TOTAL ASSETS IN OPAY FINANCE

Ikechukwu Emmanuel

I am a C++ / Cybersecurity student in national open university Lagos Nigeria. An embedded systems Developer enthusiast based in Lagos, currently researching fintech UX logic. I built a working C++ fix (POC).

Current Problem:

Right now on Finance page, Total Assets shows Wallet + OWealth + Spend & Save + Fixed all together. Users think their Savings Total includes Wallet or they can't tell what is savings vs spendable. This causes confusion when saving.

Proposed Solution - Show clear Balances:

1. Wallet Balance- Only money available to spend/transfer
2. Savings Total - Only OWealth + Spend & Save + Fixed + Targets, safebox, (NO wallet)
3. Total Financial Balance - Wallet + Savings Total (everything)

UI Layout Proposal:

[Wallet Balance] ₦XXX,XXX - View balance

[Savings Total] ₦XXX,XXX - View Breakdown savings

[Total Financial Balance] ₦XXX,XXX (Wallet + Savings)

Logic Script (for developers):

```
// Get all balances
```

```
let walletBalance = getWalletBalance();
```

```
let oWealth = getOWealthBalance();
```

```
let spendAndSave = getSpendAndSaveBalance();
```

```
let fixedSavings = getFixedBalance();
```

```
let safebox = getSafeboxBalance();
```

```
let Loan = getLoansBalance();
```

```
// CORRECT CALCULATION
```

```
let savingsTotal = oWealth + spendAndSave + fixedSavings, safebox, Loan; // NO wallet here
```

```
let totalFinancialBalance = walletBalance + savingsTotal; // Everything together
```

```
// Display
```

```
display("wallet_balance_text", walletBalance);
```

```
display("savings_total_text", savingsTotal);
```

```
display("total_financial_balance_text", totalFinancialBalance);
```

This way:

- If I save ~~N10k~~ in Fixed, only Savings Total and Total Financial increase, Wallet stays same.

- If I fund Wallet, only Wallet and Total Financial increase, Savings Total stays same.

No confusion again.

Benefit to OPay: Less customer complaints, more trust in savings, users save more when they can see clear separation.

As a student, I would love feedback from your product team and I'm happy to volunteer my POC code for testing if helpful."
